Cat Tail Tales

What is a cat tail telling you? Each tail movement that a cat makes tells us (and other cats) a little bit about what they are feeling.

Tail still, with tip twitching

Tail erect, with length quivering

Tail tucked between legs

Tail straight, and with fur bristled out

Tail low, with fur fluffed out

Tail fully erect with tip vertical

Tail raised slightly, softly curved

Tail erect, with tip tilted

Tail to one side
